Response to Arguments

1. Applicant's amendment and arguments, filed 02/14/2006, with respect to the 35 USC §102 and §103 rejections have been fully considered and are persuasive. The 35 USC §102 and §103 rejections of claims 21-34 have been withdrawn.

Allowable Subject Matter

2. Claims 21-40 are allowed.

The following is the statement of reasons for the indication of allowable subject matter: The prior art disclosed by the applicant and cited by the Examiner fail to teach or suggest, alone or in combination, ***all*** the limitations of the independent claim(s) (claims 21 and 28), particularly a method and computer system for identifying a peripheral device coupled to the computer system and receiving a device-specific interrupt from the peripheral device and responding to said device-specific interrupt by alerting a device-specific notification handler that is direct linked with the peripheral device such that the peripheral device is not identified in the alert.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Patents and patent related publications are cited in the Notice of References Cited (Form PTO-892) attached to this action to further show the state of the art with respect to interrupting scheme for multiple peripheral devices attached to a computer system.

US Pat. Pub. No. 2004/0122997 to Diamant discloses two separate interrupt handlers, one system (Fig. 2, element 16) and one for each specific device (Fig. 2, elements 18a-n), where each device sends a generic interrupt and the computer polls

each device to see who sent the interrupt. However, it appears that the system interrupt handler is involved with the handling of the peripheral interrupt.

US Pat. No. 6,523,073 to Kammer et al. discloses interrupt handling of multiple peripheral devices for a palm/pda based computer system (Fig. 1), where the palm computer system uses pulses to identify a peripheral device (Fig. 12, element 1230) instead of an identification name embedded in an interrupt message sent along with the interrupt. It does not appear Kammer et al. has a device-specific interrupt handler, but rather based on the identification via pulses, Kammer et al. refers to a table to determine what IRQ service routine to use (Fig. 13, elements 1350-1390)
